

Lesson code		2021-08-01	Level	Primary	Total Time	40mins	Teaching Week	August (02-06)	
Subject		Science	Books	The Science factor 5		Page No. 4-10		Class	V
Day Time	Chapter Topic	Objectives: The students will be able to:	Teaching Resources:	Teaching Learning Strategies					
Day 1 40 min	Introduction	Recognize the importance of asking questions in the field of science	Textbook, board, marker, worksheet	Introduction - Welcome and greet students in the class. - Introduce science as it is a way of learning about everything in our world Methodology (Discussion and pair share method) - Students will introduce themselves to the teacher one by one. - Describe that experiments involve setting something up and observing if any changes occur. - Arrange the students into pairs. Distribute the scientific method sheet to each pair. - Explain how scientists find out questions and then how they find out the answers. Activity - Students will fill the scientific method worksheet. Wrap up Ask students to share what they notice or wonder about scientist. Home Work Outline the importance of science that it helps us to understand how things work and how things happen.					
Day 2 40 min	Unit 1 The human body The nervous system	Identify parts of the human nervous system	Textbook, board, marker	Introduction - Now ask the students if they remember the functions of brain from their previous classes for spiral progression. - Listen to their answers and write them on the board Methodology (Explanation through brainstorming and demonstration method) - Draw a diagram which is showing nervous system on the board so the students can understand easily - Explain function of human nervous system in the class. - Students will do choral reading in the class. Wrap up To close the topic, ask the students to go through the diagram on textbook page. 7 Homework Go through the written work, do the corrections and learn the answers done in class https://youtu.be/Ri91Ihf4fOs					

Day 3 40 min	Unit 1 The human body The nervous system	Know working of human nervous system	Textbook, board, marker	Introduction - Review homework questions and start lesson with brainstorming session. Methodology (Brainstorming, questioning and reasoning method) - Discuss and explain working of human nervous system by drawing diagram on the board. - Students will perform an activity on textbook pg. 8 - Students and teacher will discuss orally questions of text book page 8 and students will then note down their answer independently. Wrap up Recap to evaluate the understanding of the students: - Differentiate between central nervous system and peripheral nervous system. Homework Go through the written work, do the corrections and learn the answers done in class https://youtu.be/wTZ9CLpABso
Day 4 40 min	Unit 1 The human body Circulatory system	- Identify human circulatory system - Explain the functions of circulatory system	Textbook, board, marker	Introduction - Review about previous lesson and go over homework questions. - Teacher will ask the students if they remember the function of heart from their previous classes. Methodology (Demonstration and questioning method) - Draw a diagram of circulatory system showing its parts so the students can understand easily. - Teacher and students will discuss circulatory system. - Students will observe and discuss given pictures in the textbook. Wrap up - Ask the students if they can guess how many blood vessels are there in an adult human Homework Go through the written work, do the corrections and learn the answers done in class. https://youtu.be/fDHdhc8CySk

Day 5	Unit 1 The human body	Describe human heart and its working	Textbook, board, marker	Introduction - Recap of prior knowledge by asking thinking questions from the students go over homework questions. Methodology (Explanation through questioning and reasoning) - Describe and explain working of human heart with the help of human heart chart/model. - Students will perform an activity on given pg. 10 - Students and teacher will discuss orally questions of textbook pg. 10 and students will then note down their answer independently. Wrap up Recap to evaluate the understanding of the students: - What makes up the circulatory system? - Name the three types of blood vessels. Homework Revise circulatory system by using link below https://youtu.be/fDHdhc8CySk
40 min	Circulatory system			

Allied Schools
Worksheet

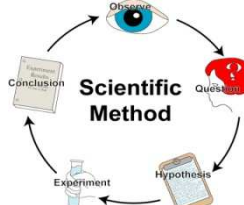

Topic: Scientific Method

Class: V

Name: _____

Date: _____

Our Experiment: _____

	Our question:
	Our equipment:
	Method (What did we do?)
	My predictions (What I think will happen)
	Results (What happened and why?)

Allied Schools
Worksheet
Unit 1 The human body

Subject: Science

Name: _____

Class: V

Date: _____

Q1. Answer these questions.

i. Name the two parts of the nervous system.

ii. Differentiate between the two parts of nervous system.

Q2. Read carefully and encircle the correct option.

i. The nervous system is made up of the brain, spinal cord and lots of different _____.

(a) Nerves (b) bones (c) cells (d) blood

ii. A nerve is a _____ that carries impulses through the body.

(a) Cell (b) bone (c) fiber (d) muscle

Answer Key

Q1. Answer these questions.

1. Name the two parts of the nervous system.

- i. The central nervous system
- ii. The peripheral nervous system

2. Differentiate between the two parts of nervous system.

<u>The central nervous system</u>	<u>The peripheral nervous system</u>
The central nervous system is the brain and spinal cord	The peripheral nervous system is all the nerves throughout the body.

Q2. Read carefully and encircle the correct option.

i. The nervous system is made up of the brain, spinal cord and lots of different _____.

- (a) **nerves** (b) bones (c) cells (d) blood

ii. A nerve is a _____ that carries impulses through the body.

- (a) cell (b) bone (c) **fiber** (d) muscle

2 We can use the scientific method.

Ask a question ?	Which type of soil is best to use for planting?		
Form a hypothesis 	<i>Circle your prediction</i> Clay soil  Soil loam  Sandy soil 		
Test the hypothesis (experiment) 	1. Put coffee filters on top of clear cups. Secure with rubber band. 2. Put sand soil, loam soil, and clay soil on top of the coffee filters on the cups. 3. Pour water onto each type of soil. 4. Observe what happens to the water.		
Make and record observations 	<i>Draw a picture to show what happens to each. Under the pictures, write about what you observed.</i> Clay soil  Soil loam  Sandy soil 		
Draw a Conclusion I learned...
