

Lesson Code		2022-08-01		Level	Primary	Total Time		40mins	Teaching Week		August(01-05)	
Subject		Computer Science		Books	Online with Computers 04 (Revised Edition)			Page No.	5-7		Class	IV
Day	Chapter Topic	Objectives: The students will be able to:		Teaching Resources:	Teaching Learning Strategies							
Day 1	How does a computer work	get introduction about computer science		Textbook	Introduction - On the 1st day of the class, interact with the students in a friendly manner. - Introduce yourself and about the subject. - Ask the names of the students. Methodology - Ask the students if they remember the definition of computer science. - Listen to their answers and write them on the board. - Write the correct definition of computer science on the board. Discussion Method - Ask the students the following questions to know how much knowledge students have about computer. - Q1. What is a Computer? - Q2. Do you have a computer at your home? - Q3. What do you do on the computer? - Q4. Do you play on the computer? - Q5. Do you know how computer was invented? - Explain the answers of the above mentioned questions to the class. Wrap up - To wrap up the lesson, summarize the questions discussed in the class. Home Work							
Day 2	How does a computer work	summarize what a computer can do, define input, processing and output		Textbook	Introduction To check the prior knowledge of students, following question will be asked: 1. Ask each student to define the terms Input, Process and Output .Write all their contributions on the writing board, under the heading "working of a computer". Note down the responses of students on the writing board and discuss the answers with the class. Methodology - Discuss that a computer is an electronic machine that can do fast and correct calculations in addition to many other works. - Discuss that word computer comes from Greek word '<i>Compute</i>' that means to calculate. - Explain the working of computer in detail. - Define them that all computing systems can be broken down into a basic input, processing and output. Explanation Method Wrap up To check that objective has been achieved or not, ask some questions from the students. Such as: 1. Define computer. 2. Define the following terms: Input b. Process c. Output Home Work: Learn the definitions of the parts of a CPU.							

Day 3	How does a computer work	recognize input, process and output	Textbook	Introduction: To check the prior knowledge of students, following question will be asked: 1. Differentiate between input and output. Note down the responses of students on the writing board and discuss the answers with the class. Methodology Explanation method • Explain another example of Input, Process and Output given on page 7 of the textbook. • The whole process of Input, Process and Output Can shortly be also described as the computer accepts data in the form of input either from the storage or from output devices. The computer performs some process on the data. The result is the information in the form of Output. This output information sometimes is also stored. This whole process is called the information processing cycle. • The students will solve the given worksheet for better understanding. Wrap up • Ask them what would happen if the computer system did not have a monitor, a keyboard, a mouse, a speaker. Home Work:
--------------	--------------------------	-------------------------------------	-----------------	--

Worksheet

Class: 4

Name: _____

Q. Write Input, Process and Output for each set of the given pictures.

Sharpening a Pencil

Blunt pencil in the sharpener

Sharpening pencil

Sharp pencil

Making Mango shake

Milk, sugar and pieces of Mango

Mixing them together in the mixer and pouring

Mango Shake

Washing Dirty Clothes

Dirty clothes, washing
Powder and water

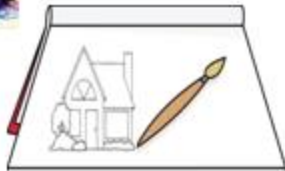

Washing and spinning

Clean clothes

Colouring Drawing

Sketch on paper and
Crayons

Colouring sketch using
crayons

Colourful drawing
