

Lesson code		2022-08-03	Level	Primary	Total Time	40mins	Teaching Week	August (15-19)	
Subject		Science	Books	The Science Factor 4		Pg. No. 12-15		Class	IV
Day Time	Chapter Topic	Objectives: The students will be able to:	Teaching Resources:	Teaching Learning Strategies					
Day 1 40 min	Unit 1 Characteristics and Life Processes of Organisms Animal anatomy	Name types of teeth Describe the size and shape of the teeth	Textbook, board	Introduction (Warm Up Session) - Ask the students to open their mouth and feel their teeth. Notice that not all of the teeth are same shape and size. Tell them that they will be learning about teeth. Methodology (Discussion and Demonstrating) - Ask the students to feel their own teeth and also allow them to look at the teeth of other students to notice the shapes. - Encourage the students to try and guess what the different types of teeth might be used for - Draw the diagram on the board as shown on page 13, label the diagram and explain it so the students can understand easily - After explanation, ask the students to draw the diagram on their own Wrap up To close the topic, discuss that not all the teeth are of same size, they are different so that they can perform different functions. Home Work Revise classwork.					
Day 2 40 min	Unit 1 Characteristics and Life Processes of Organisms Using teeth	Recognize the types of teeth State functions of teeth	Textbook, board, marker	Introduction Recap of previous knowledge by asking brainstorming questions such as: - What are the functions of teeth? Methodology (Discussion, Questioning and Demonstrating) - Explain that there are three main functions of teeth: teeth help us chew, tear and grind food. - Write these functions on the board and read aloud so the students can follow you. - Now explain that animals have four main types of teeth: canines, incisors, molars and premolars - Explain that not all animals have all four types of teeth, an animal’s teeth are suited to the type of food it eats					

				Wrap up To close the topic, discuss that there are different types of teeth that are found in different animals, performing different functions. Home Work Revise class work and draw diagram of teeth in your notebooks.
Day 3 40 min	Unit 1 Characteristics and Life Processes of Organisms	Identify canines and incisors Differentiate between canines and incisors	textbook, board, human teeth model/chart	Introduction Recap of previous knowledge by asking brainstorming questions; - Name the four main types of teeth. Methodology - Show a model or chart of human teeth with the students. - Ask students to identify canines and incisors. - Explain the shape and functions of canines and incisors. - Students will compare and contrast both types of teeth and note down differences in their notebooks. - Discuss the worksheet no. 1. Wrap up Recap of the lesson by asking questions such as: - Differentiate between canines and incisors. Home Work Revise and learn classwork
Day 4 40 min	Unit 1 Characteristics and Life Processes of Organisms	Differentiate between molars and premolars To list ways to protect teeth	textbook, board, human teeth model/chart	Introduction Recap of previous knowledge by asking brainstorming questions; - Name the four main types of teeth. Methodology - Show a model or chart of human teeth with the students. - Ask students to identify molars and premolars - Explain the shape and functions of molars and premolars. - Students will compare and contrast both types of teeth and note down differences in their notebooks. - Discuss the worksheet no. 2. Wrap up Recap of the lesson by asking questions such as: - Differentiate between molars and premolars. Home Work Solve the given worksheet.
