

Lesson code		2022-08-01	Level	Elementary	Total Time	40mins	Teaching Week	August (01-05)	
Subject		Science	Books	Science Fact File 1(2 nd Edition)		Page No.	02-07	Class	VI
Day Time	Chapter Topic	Objectives: The students will be able to:	Teaching Resources:	Teaching Learning Strategies					
Day 1 40min	Unit 1 Science Skills What is science?	Outline, introduction about science and its branches	Textbook	Introduction - On the 1st day of the class, interact with the students in a friendly manner. - Introduce yourself and the subject. Methodology (Group discussion and questioning) - Ask the students if they remember the definition of science and the names of its branches. - Explain the different branches of science. - Discuss the applications of the branches of science in human life. - Make groups of 4 or 5, ask the students to discuss among themselves what are the benefits of different branches of science? Wrap up Recap of the lesson by asking questions such as: - What is science? - Define biology, physics and chemistry. Homework Complete the worksheet.					
Day 2 40min	Unit 1 Science Skills Laboratory safety	Learn about lab safety and infer the measuring instruments, what they measure and what units are used.	Textbook Ruler, measuring cylinder, weighing scale, thermometer , stopwatch etc	Introduction To recall the prior knowledge, following questions will be asked from students: - What are the branches of science? Methodology (Discussion and Questioning) - Take the students to the science lab and explain briefly about the laboratory safety rules and their importance. - Show the measuring instruments of length, volume, mass, temperature and time, also explain the units used for these. - Make groups of four or five students and give them different measuring instruments like ruler, measuring tape, weight scale, stop watch etc. - Ask them to measure with their respective measuring instruments and share their measurements record. Wrap up Recap of the lesson by asking questions such as: - What is the difference between mass and volume? - Name the instrument that is used to measure temperature? Homework Revise and learn class work.					

Day 3 40min	Unit 1 Science Skills Taking measurements	Take measurements accurately using appropriate apparatus.	Textbook, notebook, board.	Introduction To recall the prior knowledge, following questions will be asked from students: - Name some measuring instruments used in lab. Methodology (Discussion and Questioning) - Explain the terms, length, volume, mass and temperature. - Discuss the units of measuring instruments and explain with examples. - Discuss theoretical knowledge of instruments by recalling their tour to laboratory. Wrap up Recap of the lesson by asking questions such as: - Which units are used to measure: temperature, time, and length? Homework: Make a table of measuring instruments and their units in notebooks.
Day 4 40min	Unit 1 Science Skills Taking measurements	Solve questions.	Textbook	Introduction To recall the prior knowledge, following questions will be asked from students: - Name three measuring instruments, also tell their uses. - What are the units of length and volume? Methodology (Discussion, Questioning and Group activity) - Divide the students into groups and ask them to find out the answers, given on page 7 and then discuss with them. - Discuss the attached worksheet and ask students to solve them in classroom. Wrap up - Discuss that right instruments make the measurements easy. Home Work: Revise classwork and write answers of discussed questions in notebook.
Day 5 40min	Unit 1 Science Skills	Perform the experiment	Practical notebook, measuring cylinder, beakers	Introduction To recall the prior knowledge, following questions will be asked from students: - What is meant by measuring cylinder? Methodology (Demonstration and Discussion) - Make a queue of students and take them to the science lab. - Explain the working of measuring cylinders and beakers. Also define the meniscus. - Explain how to take readings from the cylinder by filling the cylinder and letting the students read the high meniscus and low meniscus. - Discuss the answers with students and ask them to write down the answers in their notebooks. Wrap up Recap of the lesson by asking questions such as: - What is meniscus? What is the use of a graduated cylinder? Home Work: Revise and read page no. 2-7

Allied Worksheet

Name: _____

Class: VI

Date: _____

Unit 1: Science skills

Q1. What is science?

Q2. You are most likely familiar with the three main fields of science: biology, chemistry, and physics. Write the correct field next to the correct description in the table below:

	the study of life and living things
	the study of matter and its properties
	the study of matter and energy and their interactions

Q3. Look at the Contents page of your Student Book to see the names of the chapters. Identify which chapters would be biology, chemistry, or physics. If you are not sure, have a look at the first page of the chapter to find more information. Write the branch of science beside the title of the chapter in the table below.

Chapter No.	Title	Branch of science
Chapter 1	Science skills	
Chapter 2	Life and living things	
Chapter 3	Acids and alkalis	
Chapter 4	Energy resources	
Chapter 5	Simple chemical reactions	
Chapter 6	Electrical circuits	
Chapter 7	The environment	
Chapter 8	Particles	
Chapter 9	Forces and their effects	
Chapter 10	Variation and classification	
Chapter 11	Solutions	

Chapter 12	The solar system	
------------	------------------	--

ANSWERS (CLASS VI –SCIENCE)

A1: Science is about obtaining knowledge by observation and experimentation and using that information to describe natural things.

A2:

biology	the study of life and living things
chemistry	the study of matter and its properties
physics	the study of matter and energy and their interactions

A3:

Chapter No.	Title	Branch of science
Chapter 1	Science skills	all three
Chapter 2	Life and living things	biology
Chapter 3	Acids and alkalis	chemistry
Chapter 4	Energy resources	physics
Chapter 5	Simple chemical reactions	chemistry
Chapter 6	Electrical circuits	physics
Chapter 7	The environment	biology
Chapter 8	Particles	chemistry
Chapter 9	Forces and their effects	physics
Chapter 10	Variation and classification	biology
Chapter 11	Solutions	chemistry
Chapter 12	The solar system	physics
