

Lesson Code		2022-08-02	Level	Primary	Total Time	40 min.	Teaching Week	August (08-12)
Subject		Science	Books	The Science Factor 4			Pg. 8-12	Class : IV
Day Time	Chapter Topic	Objectives: The students will be able to:	Teaching Resources:	Teaching Learning Strategies				
Day 1 40 min.	Unit 1 Characteristics and Life Process of Organisms Flowering Plants	Classify plants in terms of flowering and non-flowering plants with examples Analyze the differences and similarities in flowering and non-flowering plants	Textbook, worksheet	Introduction To Check prior knowledge ask the following questions from the students: - What do you mean by classification? - Why do we classify animals? Can we classify plants also? Have their responses and share your ideas as well. Methodology (Explanation through Demonstration and Discussion method) - Explain two major groups of plants (flowering and non-flowering plants). - Give examples of flowering and non-flowering plants by showing pictures of different plants. - Ask students to draw Venn diagram and write similarities and differences between flowering and non-flowering plants. - Go around the class to see if the students are doing the task correctly. Make corrections when and where required. Wrap up Recap the main points of the lesson by asking students randomly some questions such as: - What are flowering and non-flowering plants? Homework - Revise the topic and complete the worksheet (attached).				
Day 2 40 min	Unit 1 Characteristics and Life Process of Organisms Non-Flowering plant	Discuss the characteristics of non-flowering plants.	Textbook, worksheet	Introduction To Check prior knowledge, ask the following questions from the students: - What are flowering plants? - What is common in non-flowering and flowering plants? Methodology (Explanation through Demonstration and Discussion method) - Explain the characteristics of non-flowering plants. - Discuss the examples of non-flowering plants - Illustrate the diagrams on page 10. Wrap up Recap the main points of the lesson by asking students randomly some questions such as: - What are non-flowering plants? - What are examples of non-flowering plants? Homework Revise the topic.				

Day 3 40 min.	Unit: 1 Characteristics and Life Process of Organisms Algae Diversity	Define biodiversity Recognize and appreciate diversity in life (both plants and animals) and identify ways to protect diversity	Textbook, board	Introduction Recap of prior knowledge by asking questions for spiral progression. - What do you know about ecosystem? Methodology (Discussion and Questioning method) - Explain Algae. - Explain the term ‘biodiversity’. - Ask students to discuss about measures to preserve biodiversity. - Discuss activity give on page. 11 with the students. Wrap up Recap the main points of the lesson by asking students randomly some questions such as: - What is biodiversity? Homework - Students will perform activity given on the textbook page. 11 and note down observations in their notebooks.
Day 4 40 min.	Ch. 1 Characteristics and Life Process of Organisms	Comprehend their knowledge by solving questions	textbook	Introduction To check prior knowledge of the students, ask questions such as: - Why classification is necessary? - What is biodiversity? Methodology (Explanation through Discussion and Group work) - Divide the class into 4 groups (mixed ability groups). - Explain all questions to the students. - Ask students to discuss questions given on textbook page.12 in groups and then write answers of questions in their notebooks independently. - Discuss the attached worksheet and ask students to solve it. Wrap up Recap the main points of the lesson by asking students randomly some questions such as: - What are the similarities between plants and animals? - Why is biodiversity important? Homework: - Revise and learn class work.
